

The set-out dimensions of our roof lanterns are measured to the **external wall of the timber kerb** and NOT the size of the cut-out in the flat roof.

Our Lanterns are designed to fit on a timber kerb installed inside the roof. This is usually 150mm high x 70mm wide.

We can offer any size of roof lantern you require so you can either choose the size of lantern first and then cut out the hole in the roof to fit or you can order bespoke sizes to fit the hole.

For full installation instructions download the detailed Installation Guide.
